

HABITATS DIRECTORY

A Habitats-Map (002) has been created to allow easy distinction of Habitat-types & is available on the website.

Map 001 is supported by an Interactive Habitats-Map (004), for observation of landscape details, within each Habitat Item.

The following listings act as an index to differentiate terrestrial locations in Capo Testa by habitat-types. European Nature Information System (EUNIS) classified habitats are identified overleaf with corresponding 'Habitat Items' or 'areas' associated. Each specific 'Habitat Item' has been named, coded & described, to be found in the 'Itemised Habitats Index'. Extensive Vegetation Type 1 Habitat & Type 2 Botanical Surveys were completed during 2017/18, which together with a comprehensive review of relevant Natura 2000 & European Environmental Agency (EEA) documentation assists in providing a comprehensive 'Habitats Directory'.
